BEHA RAW

A BRAND-NEW PANEL HEATER WITH PAINTABLE FRONT

The Beha Raw series, with its paintable front panel, is something completely new! I love that the heater easily can be painted in the color of the room, so that everything flows beautifully together. It blends in and creates a complete interior. Finally, this long-awaited and necessary panel heater has arrived on the market. I'm so proud and grateful for the opportunity to be the ambassador for Beha Raw.

WHERE COLOUR, CREATIVITY AND HARMONY MEET

In collaboration with interior designer Halvor Bakke, we proudly present Beha by Halvor Bakke - a new and pioneering interior series of panel heaters.

The Raw series comes with fronts in a structured material that can be painted!

Panel heaters were a popular innovation when introduced at the beginning of the 20th century. It is still one of the most practical and efficient complementary heat sources in Norwegian houses and cabins to ensure a comfortable indoor climate.

FUNCTIONAL AND GOOD LOOKING

Beha produces a wide range of panel heaters. All are at the forefront when it comes to quality, technology, and functionality. There are, however, many interior-conscious people who have long wanted a heater that overall fits better into an interior. This is exactly what we are addressing together with Halvor Bakke, and the Raw series is thus setting a completely new standard for the product category. With Raw, you create a room that is not only comfortably heated, but that complements the interior and creates harmony.

YOUR STYLE - YOUR CHOICE

All people are unique. We have different needs, identities, and interior preferences. Raw comes with front panels made of a heat-resistant and structured material that can be painted in exactly the color you want. This means that you can let the heater become a natural part of your interior plan. Create an eye-catcher with a contrasting colour or make the heater "invisible" by painting it tone-on-tone with the room's other colours. If you prefer the natural, slightly rough look, the heater can also be used as is. The front panels are delivered untreated and raw, and the appearance will vary from heater to heater. This is what gives these panel heaters their distinctive character and is precisely why we have chosen to call the series Beha Raw.

Together with Halvor Bakke, we now begin the journey with Raw. As an interior designer and with his passion for a nice and cozy home, he is an invaluable partner when it comes to showing the possibilities Raw opens up.

UNIQUE AND DISTINCTIVE

Whatever you choose to do, a Raw panel heater will add something unique and distinctive to your home. The material used in the front panels is carefully selected. It distributes the heat evenly over the front, withstands high temperatures, while the surface feels warm and "soft".

RAW WITH GENERATION 2

Beha Raw is equipped with our Wi-Fi Gen 2 technology. This gives you easy connection via Bluetooth® to your Wi-Fi network. With our Beha app, we keep it simple and user-friendly. Create programs for day/night lowering of the temperature. If you have small children, you can easily put the heater in child safety mode (CHD), so that it is not overridden. When you ventilate, the heater will register the temperature drop and go into Open window mode. Then the temperature will be reduced for a period and help you save electricity.

Since Beha Raw has Wi-Fi with Generation 2 connectivity, you can control it wherever you are, provided it has power and an internet connection. This way, you can control the electricity consumption of your complementary heating, and frost-proof the home during cold periods. In other words, control and convenience, wherever you are.

The Raw series comes in three variants. Information about these can be found under "About Beha Raw" on page 10.

ELEGANT WITH FLOOR DISPLAY

The Raw series is the only one on the market to have an elegant floor display. This makes it easy to see which temperature has been selected. You can modify the temperature either through the app or directly on the heater, and it will promptly display clear, easily readable numbers and letters, regardless of the room's lighting conditions.

"Beha Raw is not a panel heater, as it has traditionally been thought of. This heater disappears into the interior. With its soft and delicate design, it blends effortlessly into any interior, as a discreet but indispensable part of home heating. This heater is not just a source of heat, it is a gift for interior designers. The ability to effortlessly alter its expression allows it to seamlessly blend into any interior and contribute to a unified aesthetic. With the user-friendly app interface, you attain full command of the heating system, whether you're at home or in a cabin."

– Halvor Bakke
