GME 1500

Portable heater

BEHA

Description of the heater GME 1500

Portable heater at 9 kg with electronic thermostat and child safety lid, covering switch and thermostat. Steady and safe convector heater designed and developed in Norway. Beneath the heater it is a protecting against overheating towards the floor. The heating element are in aluminium.

The packaging is recyclable and should be disposed of in paper containers for cardboard.

Electrical connection and use

Before connecting, please ensure that the voltage is 230V AC 50Hz. The heater should be connected to the electrical socket in the room where it is intended to be used. Do not connect the heater with an extension cable as this may cause a fire hazard.

Care and Maintenance

Turn the thermostat dial to minimum and turned the switch off. Remove the cord from the socket by gripping the plug and gently pull it out of the wall socket. Make sure the heater is cooled down before cleaning. Clean the outside with a damp cloth. Never use abrasive cleaners or submerge the heater in water or other liquids.

Vacuum underneath the heater twice a year.

Other information

Defective heater must be delivered to a collection point for electrical waste. The heater must not be repaired, dismantled, or modified.
